

AD 2 AERODROMES**RJOO AD 2.1 AERODROME LOCATION INDICATOR AND NAME****RJOO - OSAKA International****RJOO AD 2.2 AERODROME GEOGRAPHICAL AND ADMINISTRATIVE DATA**

1	ARP coordinates and site at AD	344704N/1352621E
2	Direction and distance from (city)	10.5km (5.7nm) NW of JR Osaka station
3	Elevation/ Reference temperature	39ft / 34°C (2004-2008)
4	Geoid undulation at AD ELEV PSN	Nil
5	MAG VAR/ Annual change	7°W (2012) / 1.0'W
6	AD Administration, address, telephone, telefax, telex, AFS, e-mail and/or Web-site addresses	Kansai Airports Osaka International Airport 555, 3-chome, Nishi-machi, Hotarugaike, Toyonakashi, Osaka pref, Japan Tel: 06-4865-9571 Fax: 06-4865-9570 AFS: RJOOYDYX E-mail: itm-ops@kansai-airports.co.jp Web-site: http://www.kansai-airports.co.jp/
7	Types of traffic permitted(IFR/VFR)	IFR/VFR
8	Remarks	Osaka Airport Office (CAB) Osaka International Airport 371, 3-chome, Nishi-machi, Hotarugaike, Toyonakashi, Osaka pref, Japan Tel: 06-6843-1121 (2330-0815UTC MON THRU FRI)

RJOO AD 2.3 OPERATIONAL HOURS

1	AD Administration	2200 - 1200
2	Customs and immigration	On request Customs: 06-6576-3104, 06-6576-3123 Immigration: 06-4703-2100
3	Health and sanitation	On request Quarantine(human): 06-6571-4312 Quarantine(animal): 072-455-1956 Quarantine(plant): 06-6571-0801
4	AIS Briefing Office	Nil
5	ATS Reporting Office(ARO)	Nil
6	MET Briefing Office	H24 (KANSAI)
7	ATS	2200-1200 (Flight Information Service (except ATIS) and Alerting Service: H24).
8	Fuelling	H24
9	Handling	2100-1330
10	Security	2100-1200
11	De-icing	Nil
12	Remarks	Nil

RJOO AD 2.4 HANDLING SERVICES AND FACILITIES

1	Cargo-handling facilities	All the modern institutions that deal with the weight thing to a Boeing 747 type passenger plane.
2	Fuel/ oil types	Fuel grades: JET A-1 Oil grades: All turbine grades
3	Fuelling facilities/ capacity	Hydrant refueling on terminal apron for turbine fuel. Fuel truck refueling. / No limitations
4	De-icing facilities	Nil
5	Hangar space for visiting aircraft	Nil
6	Repair facilities for visiting aircraft	Nil
7	Remarks	Nil

RJOO AD 2.5 PASSENGER FACILITIES

1	Hotels	Hotel near the Airport.
2	Restaurants	Available but not continuous 0700-2130 hours
3	Transportation	Monorail, busses and taxies
4	Medical facilities	Toyonaka city hospital
5	Bank and Post Office	Post office at Airport
6	Tourist Office	At Airport
7	Remarks	Nil

RJOO AD 2.6 RESCUE AND FIRE FIGHTING SERVICES

1	AD category for fire fighting	CAT 9
2	Rescue equipment	Chemical fire fighting truck x 3, Water supply truck, Emergency medical equipments conveyance truck, Lighting power supply truck
3	Capability for removal of disabled aircraft	Nil
4	Remarks	Nil

RJOO AD 2.7 SEASONAL AVAILABILITY-CLEARING

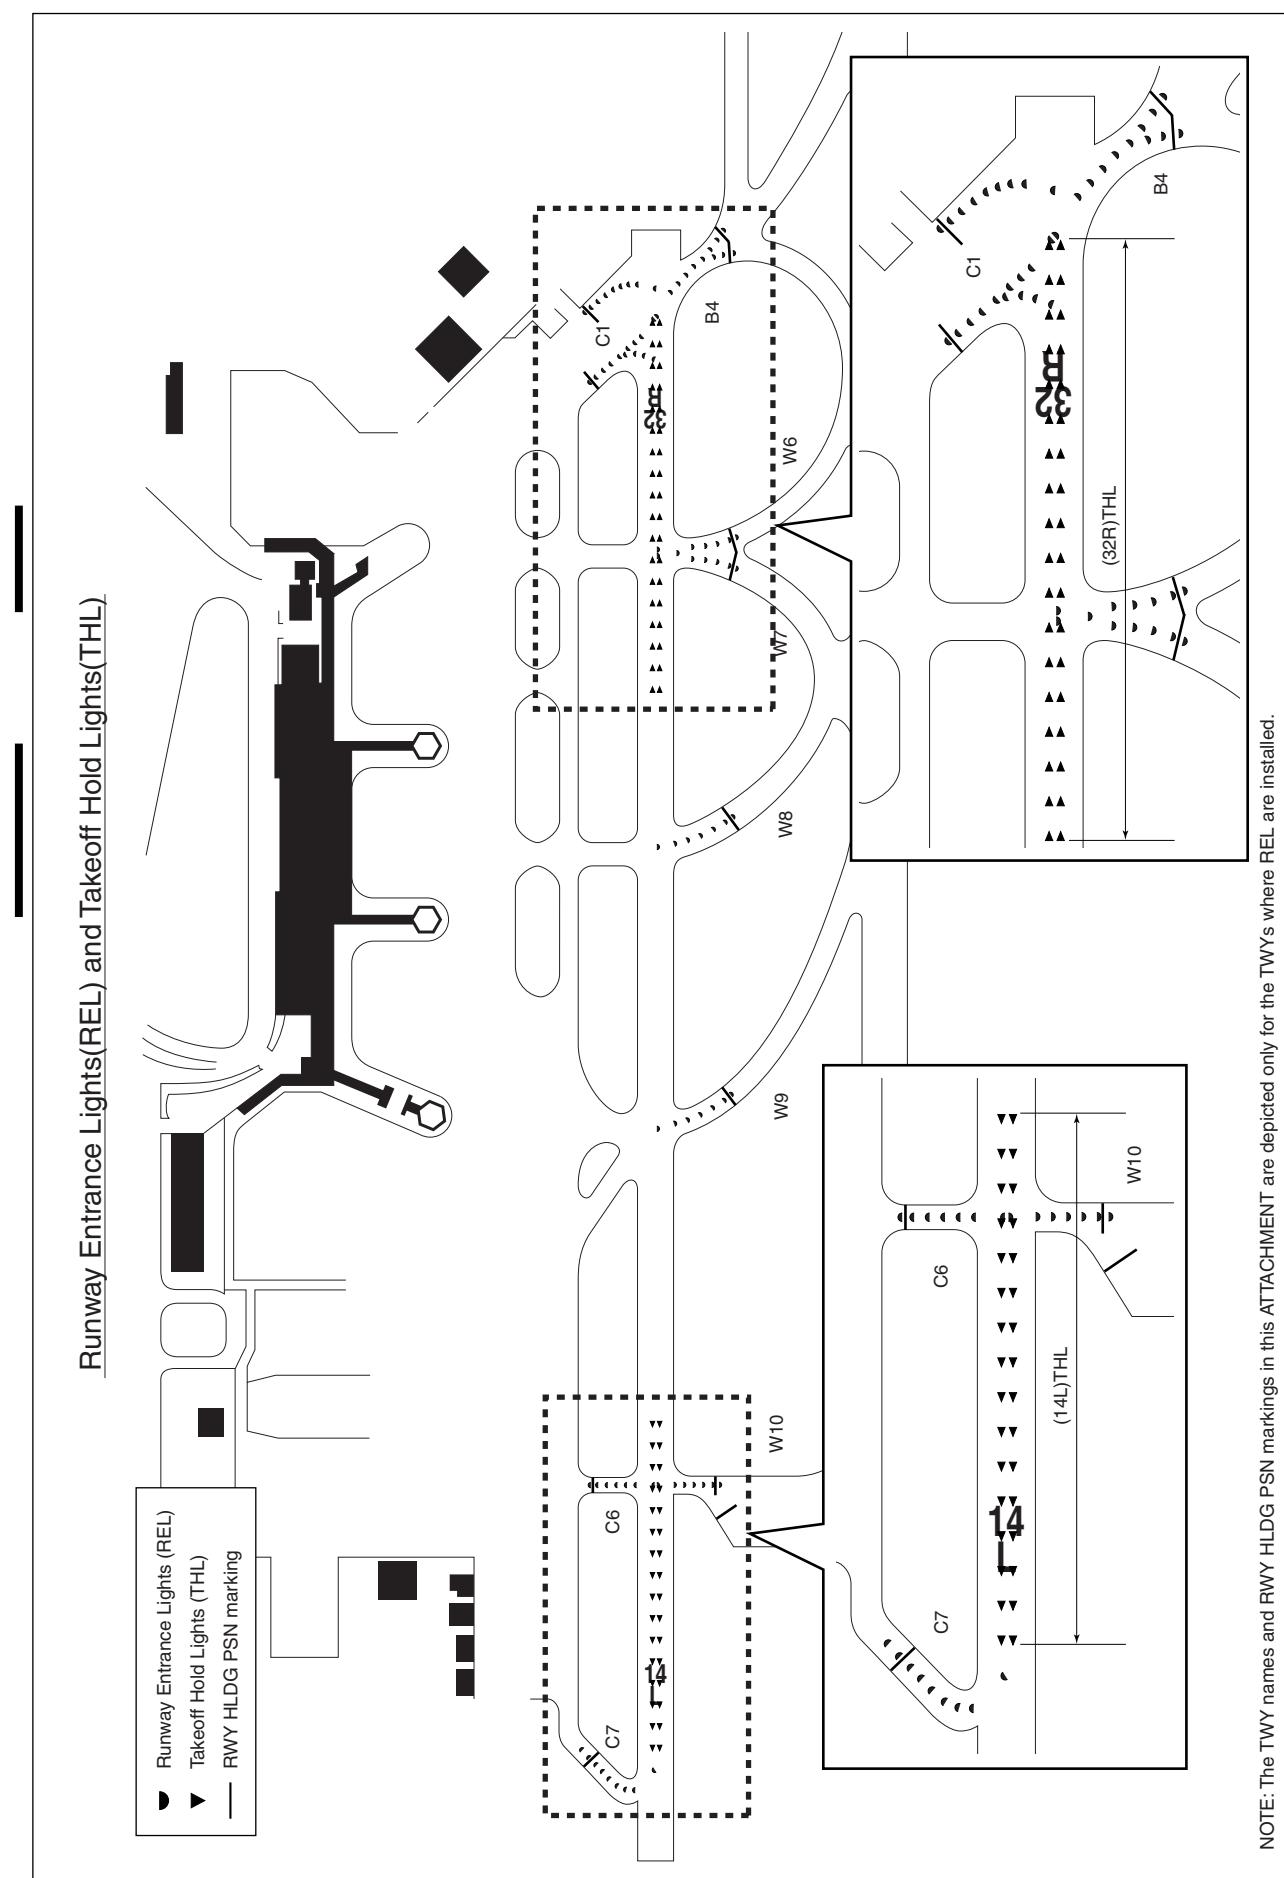

1	Types of clearing equipment	Snow removal equipment: Motor graders
2	Clearance priorities	1) RWY 14R/32L 2) TWY A4, B2, B3, B4, C1, C4, C6, E1, E5, W2, W9, W10, Apron TWY BTN E1 and E5 3) RWY 14L/32R 4) TWY A1, A2, A3, A5, B1, W1, W3
3	Remarks	1) Snow removal will be commenced with the order of priority as item 2, if the runways and taxiways are contaminated with 3 cm depth of snow. 2) Seasonal availability: All seasons Any contaminants on RWY centerline, landing strip and other lighting aids shall be removed as and when necessary so as to provide good contact with RWY.

RJOO AD 2.8 APRONS, TAXIWAYS AND CHECK LOCATIONS DATA

AIRCRAFT STAND TAXILANE AND PARKING AREAS

R1, R2, R5, R6, apron TWY at Apron NR5, NR6, and NR7 :Aircraft stand taxilane
 Spots 45, 45W, 46, 47, 48, 51 to 53 and Apron NR7 and NR8 :Parking areas
 R-INT. and E-INT. :Intersections

Surface Painted Direction Sign and Surface Painted Location Sign

Type of Surface Painted Markings

1. Type of Surface Painted Markings

Surface Painted Direction Sign

This type of marking at a taxiway intersection indicates the designation and direction of taxiway leading out of intersection.

Black inscriptions with an arrow with a yellow background.

- 2. On each of the Taxiway A3, A4, C4, behind APRON NR4, beside SPOT20, R1,R6,W9 and APRON Taxiway between SPOT43 and SPOT44 surface painted markings are provided (refer attached drawing).

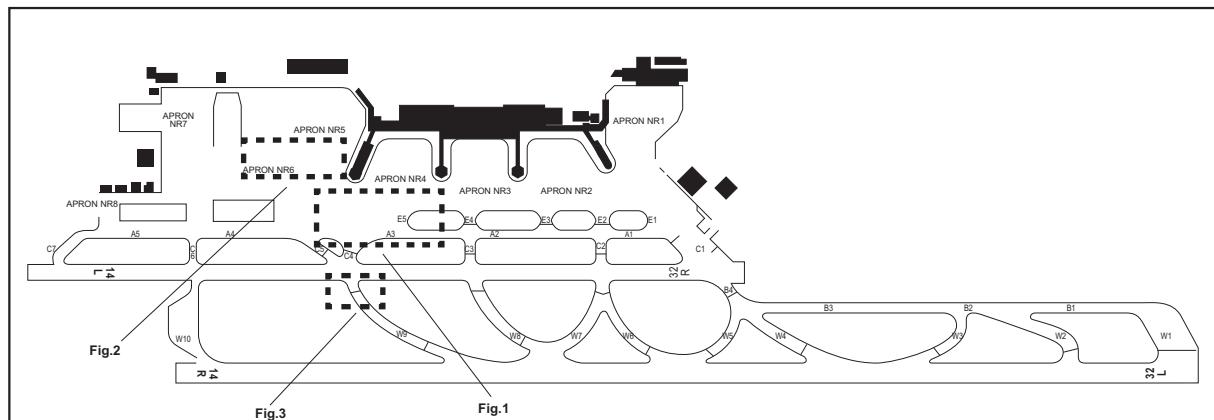

Fig.1

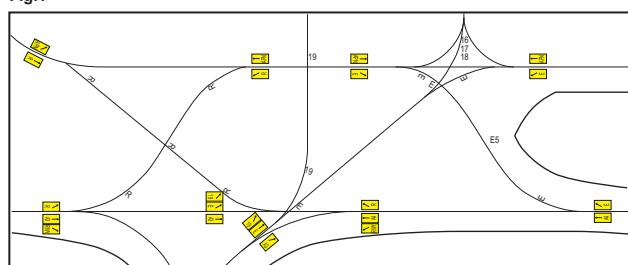

Fig.3

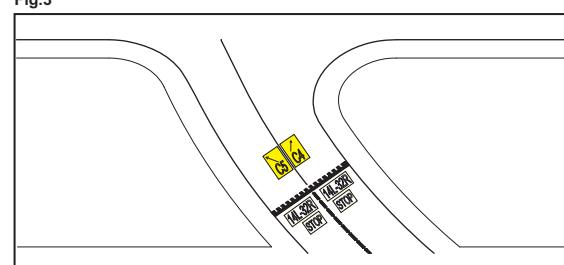

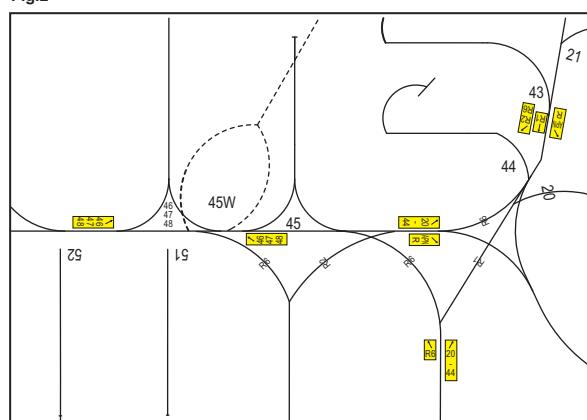

Fig.2

VISUAL DOCKING GUIDANCE SYSTEM

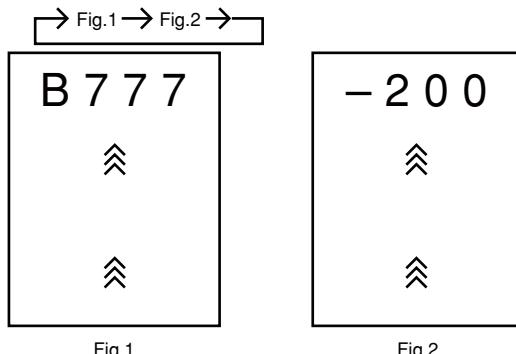

1. General

- (1) Aircraft parking stands NR13, NR14, are equipped with a visual docking guidance system. The pilots of an arriving aircraft assigned to park at one of these parking stands can use this system to be guided and stop the aircraft at the correct parking position.
- (2) This system is operational only in the automatic mode and in an event of a system failure, the aircraft shall be manually guided by a marshaller to the stopping position.
- (3) The visual docking guidance system consists of a display screen for pilots and a laser scanner. The system detects and analyses the aircraft type of an approaching aircraft, tracks it through the laser scanner, and displays these results on the display screen.
- (4) The display screen indicates the following information:
 - a) type of the approaching aircraft
 - b) deviation from the lead-in center line
 - c) distance to the stopping position

The above information is provided equally to the pilots on both left seat and right seat.

2. Aircraft Type Indication

- (1) An operator on ground shall input the aircraft type into the system before the aircraft approaches the parking stand. Upon accepting the input, the system carries out internal calibration, starts the laser scanner simultaneously, and indicates the aircraft type according to the input. The system then will begin to indicate yellow lead-in arrows scrolling upwards prompting the aircraft to proceed. (Fig.1, Fig.2)

- (2) When the laser scanner detects the approaching aircraft, the display screen will indicate the aircraft type, a "T" bar, and a lead-in upward arrow in yellow.
- (3) At least until the approaching aircraft arrives at a point 15 meters before the stopping position, the system will identify the aircraft type and will compare with the previously input aircraft type. If these data match, the system will continue its operation. If they do not match, the display screen will indicate "STOP" with a red border, and "ID FAIL" simultaneously. (Fig.3)

NOTE: At this moment, the pilots must stop the aircraft immediately.

When the operator re-input the correct aircraft type into the system and the system finds it correct, it resumes normal operations indicating the correct aircraft type on its display screen.

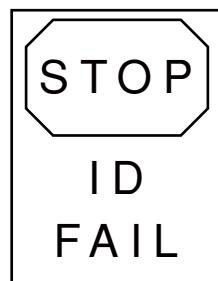

Fig.3

3. Taxiing and Lateral Center line Guidance

- (1) While taxiing the aircraft using the system, the pilots should maneuver the aircraft at a low speed to the stopping position. In an event when "SLOW" is indicated on the display screen, the pilots should further decelerate the taxiing speed to avoid overshooting. (Fig.4)

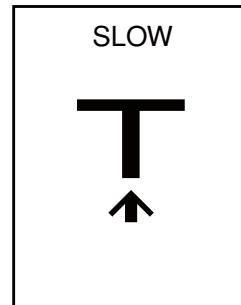

Fig.4

- (2) Deviation of an upward yellow arrow from the center line of "T" indicates the deviation of the approaching aircraft relative to the center line of the parking stand either to right or left. Further, an additional flashing red arrow on the either side indicates the required direction for the aircraft to turn(Fig.5, Fig.6) and indicate numerical value of remaining distance. (Fig.7, Fig.8)

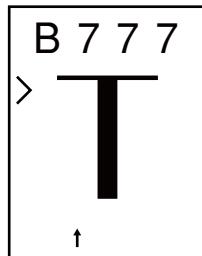

Fig.5

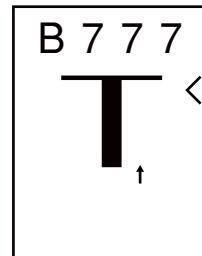

Fig.6

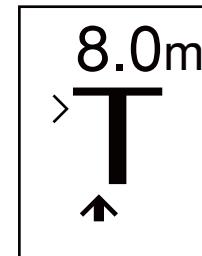

Fig.7

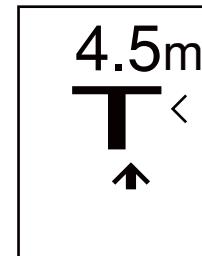

Fig.8

4. Stop Guidance

- (1) When the approaching aircraft is within 20 meters from the stopping position, the shaft of the illuminated "T" will start to reduce in its length from the bottom to indicate the approaching rate of the aircraft, indicating the remaining distance to the stopping position successively. (Fig.9, Fig.10) As the aircraft approaches the stopping position, the shaft of the illuminated "T" retract one row for every 0.3 m.

At aircraft parking stands when the approaching aircraft is within 30 meters from the stopping position, display of digital countdown will start.

As the aircraft approaches the stopping position, a digital countdown shows the distance to stop position numerically, for every 1.0 meters (from 30 to 5 meters to the stop position), for every 0.5 meters (from 5 to 2 meters to the stop position) or for every 0.1 meters (from 2 to 0 meters to the stop position).

When the approaching aircraft is within 20 meter from the stopping position, the shaft of the illuminated "T" will start to reduce in its length from the bottom to indicate the approaching rate of the aircraft, indicating the remaining distance to the stopping position successively. (Fig.11, Fig.12)

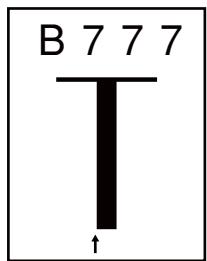

Fig.9

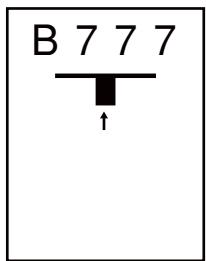

Fig.10

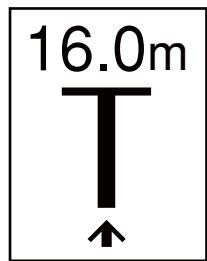

Fig.11

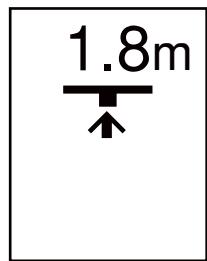

Fig.12

- (2) When the aircraft reaches the stopping position, a message "STOP" will be displayed on the screen with a red border. (Fig.13)

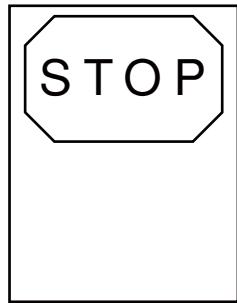

Fig.13

- (3) When the aircraft is stopped at the correct stopping position, a message "OK" will be displayed on the screen in several seconds. (Fig.14)

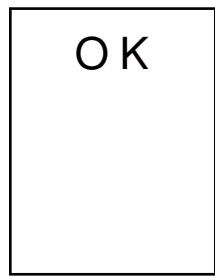

Fig.14

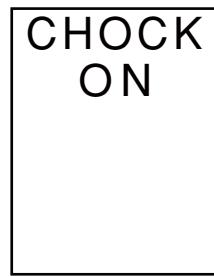

Fig.15

- (4) When the operator applies chocks, and switches on "CHOCK ON" switch, the display screen will display "CHOCK ON." (Fig.15)

- (5) If the aircraft stops at a position beyond the correct stopping position, a message "TOO FAR" will be displayed on the screen. (Fig.16)

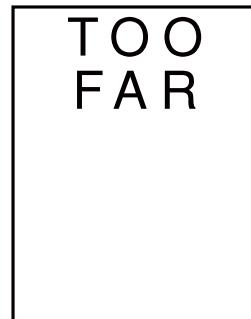

Fig.16

5. Cautions and Safety

- (1) When the system displays an incorrect aircraft type, or when such a message as "STOP", "ID FAIL", or "WAIT" appears on the display screen, the pilots should stop the aircraft immediately. (Fig.3, Fig.13, Fig.17)

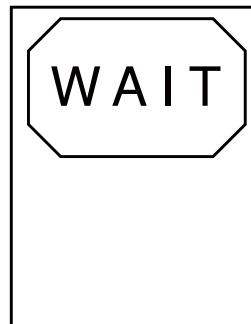

Fig.17

- (2) During heavy fog, rain or snow the visibility for the docking system can be reduced. When the system is activated and in capture mode, the display will deactivate the floating arrows and show "SLOW" (Fig.18). The message will be superseded by the closing rate bar as soon as the system detects the approaching aircraft. The pilot must not proceed beyond the bridge, unless the "SLOW" text has been superseded by the closing rate bar.

RJOO AD 2.20 LOCAL TRAFFIC REGULATIONS**1. Airport regulations****1. On use of this airport**

In order to cope with the increasing flight frequencies and to ensure the safety of flight, the following shall apply to an aircraft operators.

- 1.1 Aircraft other than those of scheduled flights being approved by the Minister of Land, Infrastructure, Transport and Tourism and those which come under the para. 1.2 (a) and (b) below specified are all subject to the prior permission of the Administrator Osaka INTL Airport.
- 1.2 In principle, the use of this airport by light fixed wing aircraft having a maximum take off weight of 5700kg or less shall not be permitted excepting the aircraft underspecified:
 - (a) Aircraft used for operations of:
 - (1) Ministry of Land, Infrastructure, Transport and Tourism
 - (2) Japan Coast Guard,
 - (3) Police Agency,
 - (4) Local Government,
 - (5) Police Department,
 - (6) Fire Department.
 - (b) Aircraft belonging to newspaper offices having their own hanger facilities in this airport, including chartered aircraft.
 - (c) Aircraft which have been registered to use this airport as a home base.
 - (d) Aircraft using this airport with the purpose of aircraft maintenance by the reason that the concerned aircraft operator has now been under the maintenance contract with the maintenance factories located in this airport.

Note: Whenever the flight plan bound for this airport is submitted by the aircraft operator to a airport office or a airport branch office before flight is conducted, the concerned airport authority is urged, prior to its acceptance, to ascertain whether or not the advance approval has been given the operator concerned.

1.3 On the control of flight frequencies

The flight frequency of aircraft is controlled as specified below:

- (a) The total numbers of IFR aircraft permitted to land and to take off are confined to;
 - (1) 36 aircraft for an hour
 - (2) 93 aircraft within 3 hours on a continuous basis
 - (3) 370 aircraft for a day
- (b) The total numbers of IFR aircraft permitted to land are confined to;
 - (1) 20 aircraft an hour
 - (2) 60 aircraft within 3 hours on a continuors basis.

Note:Aircraft in an emergency situations are exempted from applying any of the foregoing limitations.

2. Principal Runway Usage Classification

	Arrival		Departure
RWY 14L/32R	Maximum take-off weight at or less than B737-800 (79,243kg)		Maximum take-off weight at or less than ERJ170 (34,500kg)
RWY 14R/32L	B737-800 B737-700	Other aircraft described left, maximum take-off weight more than B737-800 (79,243kg)	Maximum take-off weight more than ERJ170 (34,500kg)

3. 補助動力装置（APU）の使用制限		3. Restrictions about the use of auxiliary power units(APU)
航空機が固定電源設備付きのスポットを使用する場合は、管理者が特に認める場合を除き、次に掲げる時間を超えて補助動力装置を使用してはならない。		When an aircraft is using an aircraft parking stand with fixed electric power facilities, APU shall not be used outside the time periods specified below except when specifically acknowledged by the authority as necessary.
(1) 出発予定時刻前の 30 分間		(1) 30 minutes prior to the estimated off-block time.
(2) 到着後、固定電源設備が使用可能となるまでに必要とする最小限度の時間		(2) The minimum time required for switching over to the fixed electric power facilities, after arrival at the parking stand.
(3) 航空機が点検整備のため補助動力装置を必要とする場合は最小限度の時間		(3) The minimum time required for aircraft maintenance purposes if needed.
注：スポット 4 及び 5 ~ 27 は固定電源設備が設置されている。		NOTE: Spot 4 and 5-27 are equipped with fixed electric power facilities.

4. ATC Procedure

ATC clearance will be obtained by "Voice radiotelephone(Voice RTF)" or "Departure Clearance by data link(DCL)". Shown in detail below (a) or (b).

CLEARANCE FLOW	(a) Voice RTF	(b) DCL Refer to ENR 1.5.4.1(Operation for Departure Clearance by data link(DCL))
REQUEST CLEARANCE	Call OSAKA DELIVERY(118.8) at 5 minutes before starting engines, with the following information. (1) Call sign (2) Destination (3) Proposed flight level/altitude (alternative flight level/altitude, if any) (4) Parking position(spot number)	- Send RCD message at 5 minutes before starting engines. - Monitor OSAKA DELIVERY(118.8). NOTE: - Start monitoring OSAKA DELIVERY(118.8) once RCD message is sent. In case coordination is required, OSAKA DELIVERY calls the pilot on Voice RTF.
CALL READY	In case that the engines could not be started within 5 minutes after receiving ATC clearance, pilot shall notify OSAKA DELIVERY(118.8) of its delay.	
FOR ADDITIONAL REQUEST EXCEPT CLEARANCE	Call OSAKA DELIVERY(118.8) on Voice RTF when requesting clearance.	Call OSAKA DELIVERY(118.8) on Voice RTF after receiving an FSM for CDA.

2. Taxiing to and from stands

Nil

3. Parking area for small aircraft(General aviation)

Nil

4. Parking area for helicopters

Nil

5. Apron - taxiing during winter conditions

Nil

6. Taxiing - limitations

6.1 Safety measures against jet engine blast. (See attachment)

- 1) In case of holding before taking off from RWY 32R, the aircraft which wing span is at or less than 35.79m shall follow the specific taxiway centerline marking installed on TWY C1.
- 2) In order to avoid effect of the blast on RWY 14L, jet aircraft taxiing via TWY W10 are to follow the specific nose-wheel guide line installed on TWY W10 when taking off from RWY 14R.

6.2 Aircraft using TWY C1 and taking off from RWY 32R may be instructed to hold at No.2 stop line illustrated in attachment.

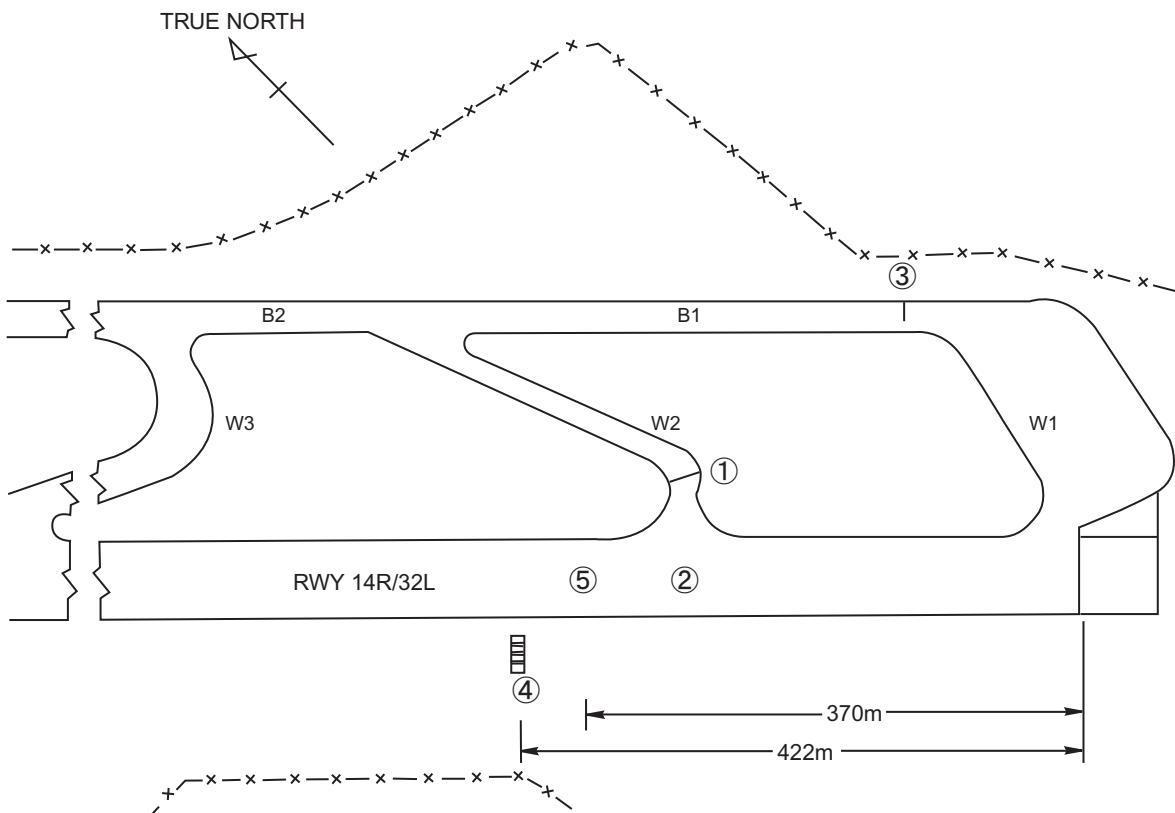

6.3 While operating within aprons, follow strictly yellow nose wheel guide lines.

Taxiing and Taking off Procedure for RWY 32L

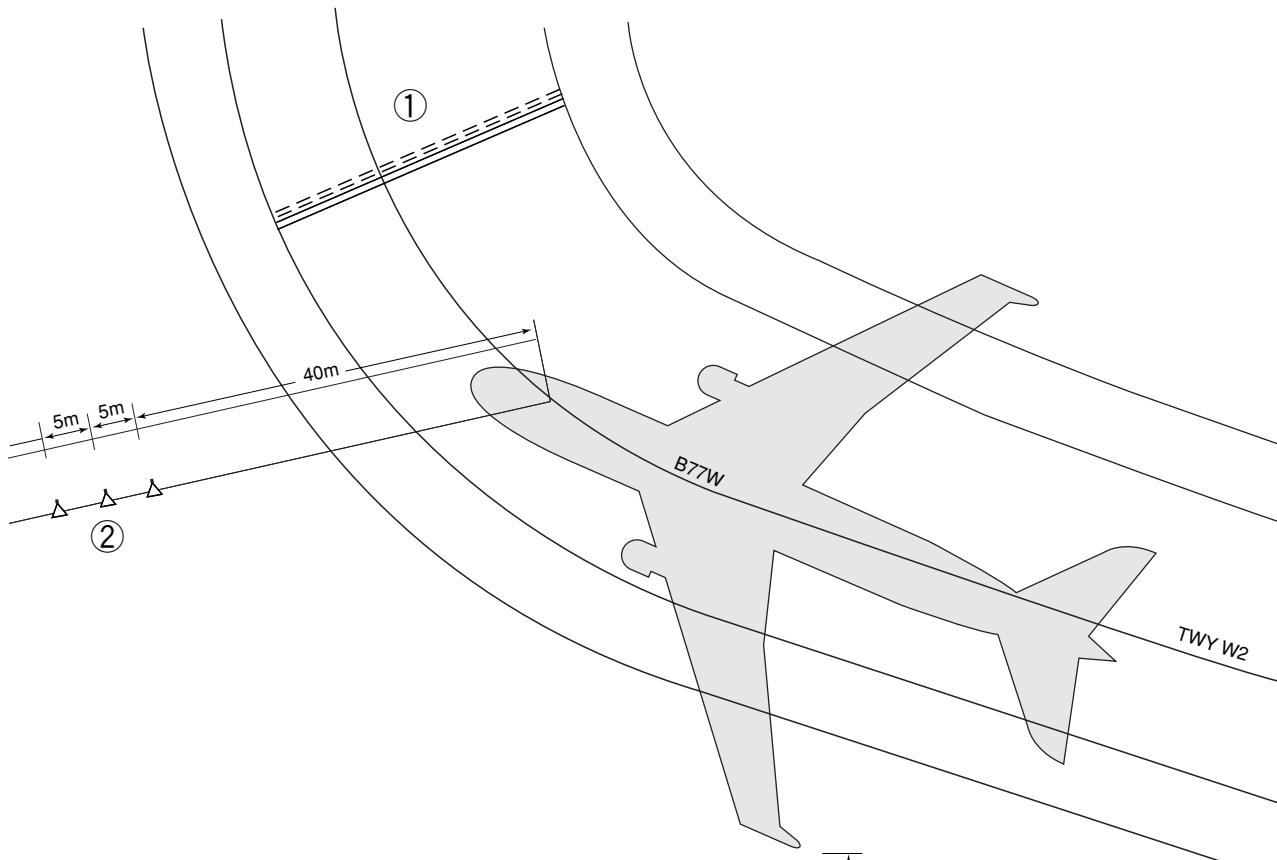

Key to the chart below:

- ① Runway holding position marking on TWY W2
- ② 2700m position from RWY 14R THR
- ③ NO.1 Stop line
- ④ PAPI
- ⑤ TKOF power setting position

*See the back page for more detailed information.

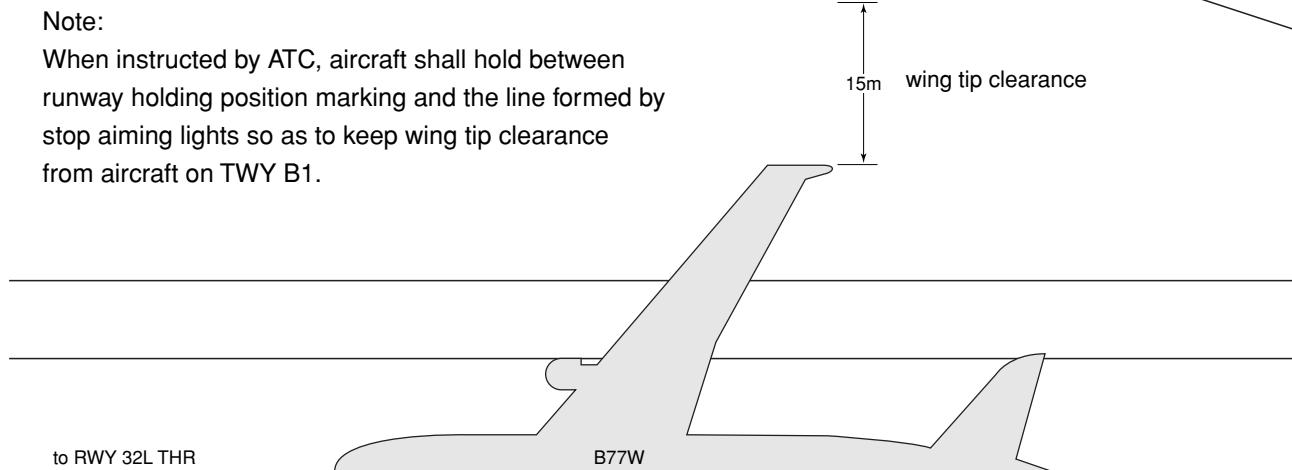

TAXIING HOLDING POSITION ON TWY W2

Note:

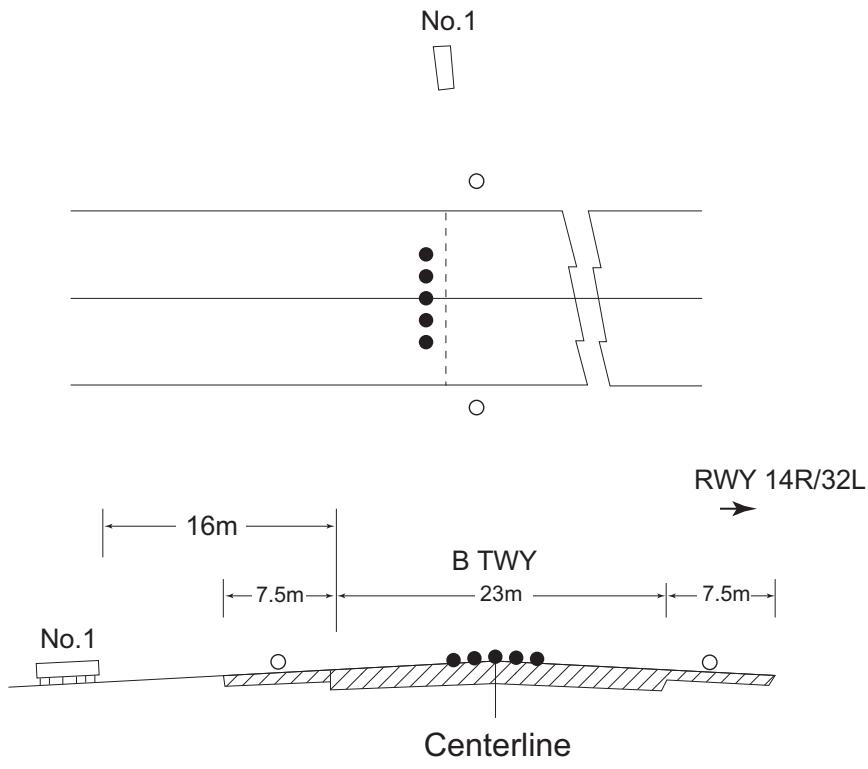

When instructed by ATC, aircraft shall hold between runway holding position marking and the line formed by stop aiming lights so as to keep wing tip clearance from aircraft on TWY B1.

Legend: ① Runway holding position marking

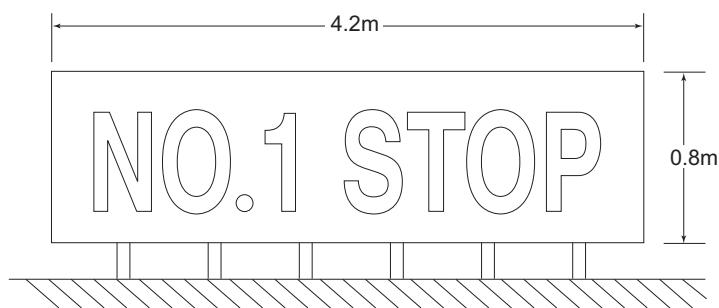

② Stop aiming lights (Type : M-1 Red light)

Intermediate holding position marking (No.1 Stop line) on Taxiway B

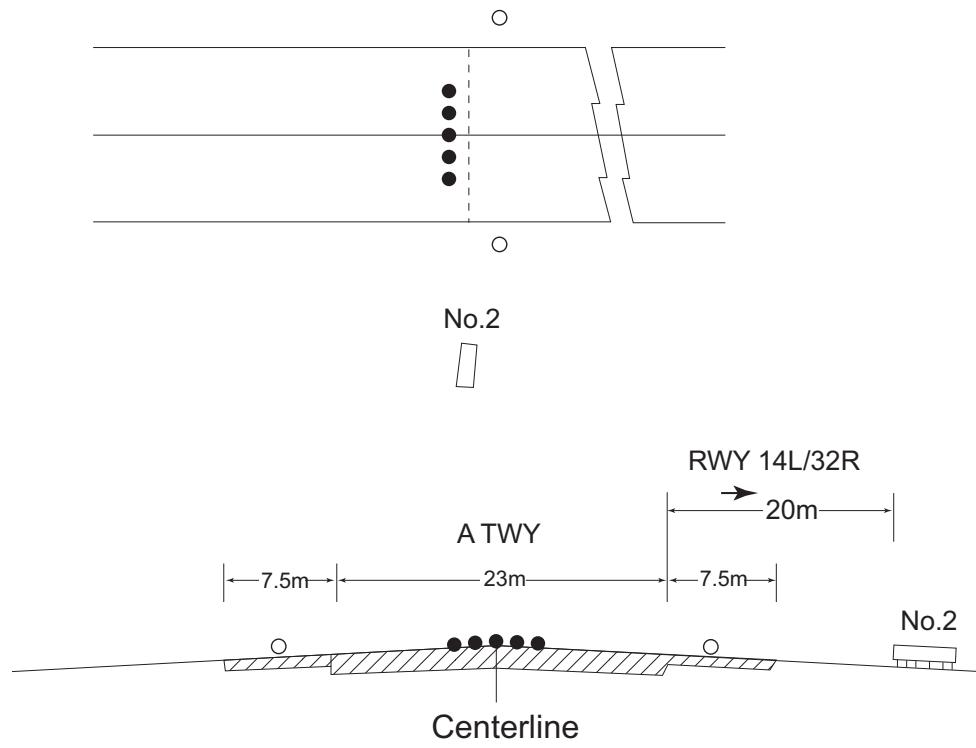

Legend:

- Intermediate holding position light
- Taxiway edge light
- No.1 Taxiing guidance sign

RJOO AD 2.21 NOISE ABATEMENT PROCEDURES

1. Local flying restrictions:

- 1.1 In order to reduce the noise impact in the vicinity of airport, no jet airplane fitted with three or more engines shall be permitted to operate except in an emergency situation or with prior permission of the airport administrator.
- 1.2 No aircraft which produce the noise exceeding the maximum allowable levels shown in the following table, shall, except in an emergency situation, be permitted to operate. However, A-300 type of aircraft shall not exceed the noise level 97dB (A) whenever take off from RWY 32L/R.

Time(UTC)	/ Maximum Allowable Noise Level
22:00 - 11:00	/ 107 dB (A)
11:01 - 12:00	/ 100 dB (A) for take off, 107 dB (A) for landing

Note: (a) All aircraft operators are requested to present in advance their "Operation Manuals" to the airport authority, giving there in the detailed information on the following items specified for each time bracket and aircraft type.

 - (1) Maximum takeoff weight calculated for each runway to be used, temperature, and headwind component.
 - (2) Flap angle.
 - (3) Climb speed.

(b) The figures of the noise level shown in the above Table will be the value to be measured by the noise monitoring equipment installed at the position 2,400 meter from the threshold of Runway 14R on 315 DEG magnetic (Kushiro Primary School).
- 1.3 Aircraft using taxiway B and departing from runway 32L at Osaka International Airport, in principle, shall make Intersection takeoff via taxiway W2. In this case, available runway length is 2700m from runway 14R threshold. In case of having intention of making full length takeoff for the operational requirements, the pilot shall advise ATC to that effect when he initiates call for ATC clearance and shall follow procedures under specified.
 - (a) In principle, departing aircraft shall not hold on taxiway W1.
 - (b) In principle, aircraft shall hold short of NO.1 stop line until receiving taxi clearance.
 - (c) Whenever practicable, pilots are urged to make rolling takeoff without stopping at the threshold and to achieve takeoff power at position 370m from the threshold with gradual advance of power lever after passing the threshold.
- 1.4 For landing on Runway 32 and 14: A non-instrument or visual approach shall not be made at an angle less than the ILS glide path or PAPI indicates.
- 1.5 For circling approach to Runway 14: Weather conditions permitting, an aircraft making circling approach is to be requested to maintain an altitude as high as practicable.

2. 騒音軽減運航方式

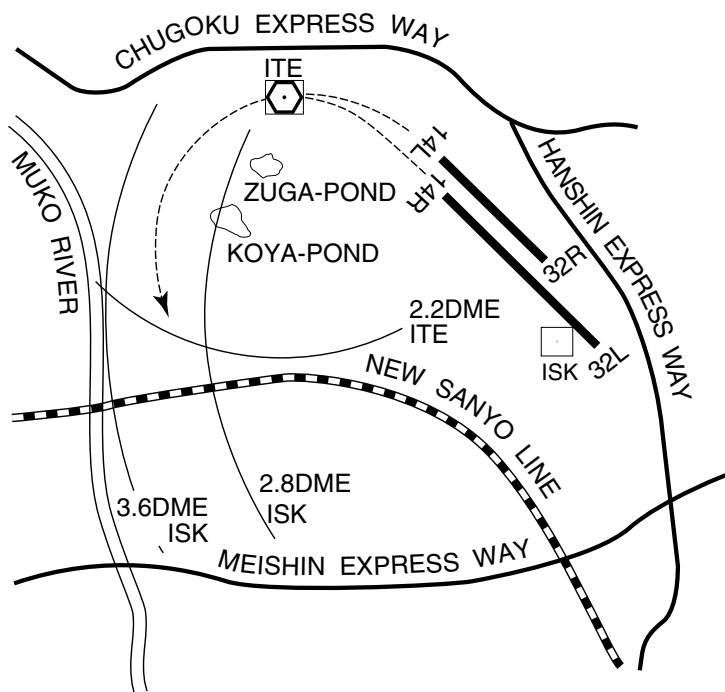

- (1) すべてのジェット機に対して、空港周辺における航空機騒音軽減のため、運航の安全に支障のない範囲で、以下の方式が適用される。ただし、これらの方によることができない航空機は実効的にこれらと同等と認められる代替方式を実施するものとする。
- i) 離陸について
急上昇方式
 - ii) 着陸について
ディレイド・フラップ進入方式及び
低フラップ角着陸方式
 - iii) リバース・スラストについて (RWY32L 着陸時)
19時から21時までの間、リバース・スラスト使用はアイドルまでに制限する。
- (2) 優先滑走路方式
なし
- (3) 優先飛行経路
すべての離陸機を対象に、空港周辺地域における航空機騒音の影響を受ける区域の拡大を防止するため、次のような優先飛行経路が運航の安全に支障がない範囲で適用される。
- i) 滑走路 32R/32L から離陸する場合
離陸後 ITE VOR/DME 附近上空を通過し、かつ北端を中国縦貫道路、南端を瑞ヶ池及び昆陽池並びに西端を武庫川で囲まれる範囲を飛行するよう左上昇旋回を継続し、ITE VOR/DME 2.2DME を通過した後、標準計器出発方式に従うこと。
 - ii) 滑走路 14R/14L から離陸する場合
離陸後、阪神高速道路まで直線飛行し、その後旋回上昇に移し、標準計器出発方式に従うこと。

注) 上記地上物標については、付図を参照のこと。

2. Noise Abatement Operating Procedures

- (1) For all jet aircraft, in order to reduce aircraft noise in the vicinity of airport, the following procedures shall be applied unless compliance of the procedures adversely affects the safety of aircraft operations. In case that the aircraft is unable to take these procedures, pilots should execute alternative procedures which are considered to be practically equivalent.
- i) For take-off
Steepest Climb Procedure
 - ii) For landing
Delayed Flap Approach Procedure and Reduced Flap Setting Procedure
 - iii) Reverse Thrust (landing RWY32L)
Between 1000UTC (1900JST) and 1200UTC (2100JST), the use of reverse thrust is limited to idle except for safety reasons.
- (2) Preferential Runways Procedures
Nil
- (3) Noise Preferential Routes
For all departing aircraft, in order to prevent the enlargement of aircraft noise affected area around the airport, the following noise preferential routes are applied except for safety reasons.
- i) Take-off from runway 32R/32L:
After take-off, execute continuous left climbing turn so as to pass over near ITE VOR/DME and keep flight track within the area defined by Chugoku Express Way at the north end, ponds of Zuga and Koya at the south end, and Muko River at the west end until crossing ITE VOR/DME 2.2DME, then proceed via SID.
 - ii) Take-off from runway 14R/14L:
After take-off, strictly follow extended runway centerline until passing Hanshin Express Way and then execute climbing turn so as to proceed via SID.

Note: Refer attached chart for the above mentioned landmarks.

2. Lost communication procedures for arrival aircraft under radar navigational guidance

If radio communications with Kansai Approach/Radar are lost for 1 minute, squawk Mode A/3 Code 7600 and,

- (I) 1. Contact Osaka Tower.
 2. If unable, proceed in accordance with Visual Flight Rules.
 3. If unable, proceed to IZUMI at last assigned altitude or 5,000 feet whichever is higher, and execute instrument approach via IZUMI ARRIVAL.
- (II) Procedures other than above will be issued when situation required.

3. Notwithstanding the requirement as mentioned "JET circling to West only" in each approach minimum column of the instrument approach charts of RJOO AIP, Boeing 727 series 100 or lighter jet ACFT may be instructed by ATC to enter into East side traffic circuit during VMC in the daytime.

4. Operation of Special VFR arrival by fixed wing aircraft NOT authorized except in an emergency situation.

5. For the purpose of preventing disasters to Petroleum Oil Liquid (POL:See AD2.24 AD chart) facilities, all aircraft making take off, landing or missed approach are requested to avoid flying over and in the vicinity of POL facilities.

RJO0 AD 2.23 ADDITIONAL INFORMATION

1. Maintenance works will be in progress all the year round during SR to SS along the edges of RWY 14R/32L and/or 14L/32R and TWY subject to VMC.

2. Runway 14L/32R or 14R/32L is subject to closing for maintenance purpose during the hours from 1300 UTC to 2100 UTC every month. Consult NOTAM RJO0 for further detailed information.

3. Position not visible from control tower.

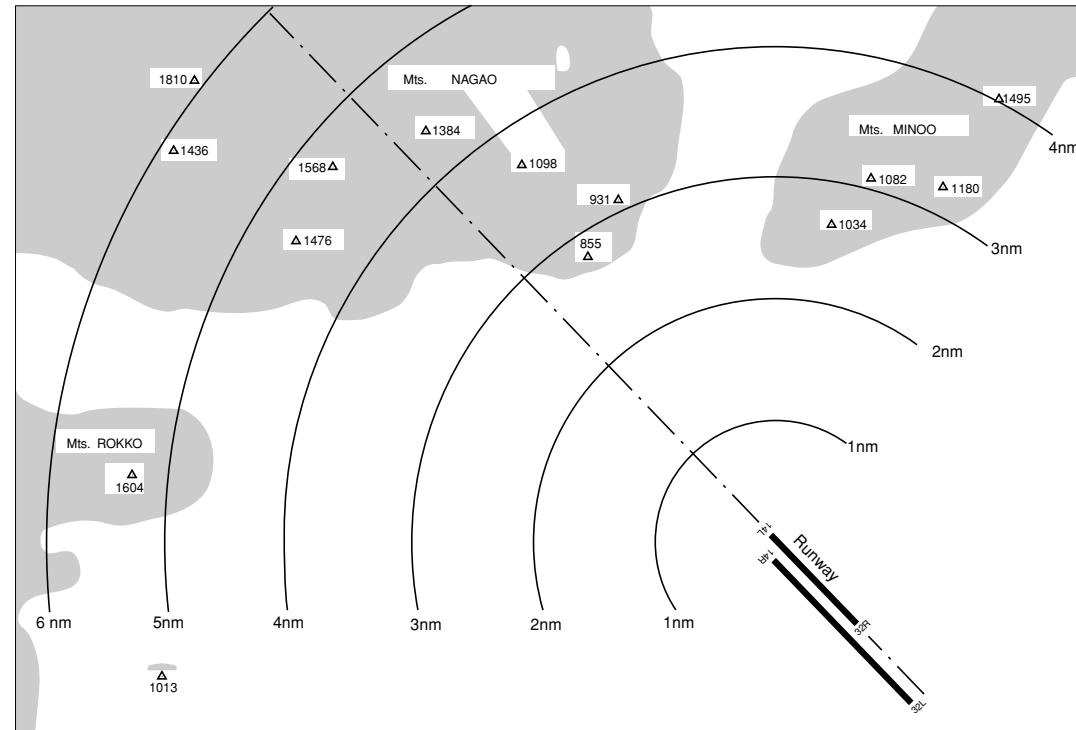

- 1) Spot Nr.4A, 23, 24, 25, 41, 42
- 2) Apron Nr.7

4. Avoidance Flight of Mountainous Areas is shown in attached chart.

Avoidance Flight of Mountainous Areas at OSAKA INTL Airport

For the purpose of avoiding collision at the mountainous area shown on the chart, the aircraft taking off from RWY 32 at OSAKA International Airport should turn to the left as soon as possible with due regard to the noise at the time of climbing, but without sacrificing the flight safety.

Note: The areas of hatching are obstructions which are projecting above the plane surface having a 40:1 slope from RWY 14 threshold.

5. Helicopter Landing area

Location : On apron Nr8

TRANSITION

KAGAWA TRANSITION

From over TIGER, via YOE R291 to SUMAR, via ITE R260 to intercept and proceed via KTE R057 to KTE VOR/DME.

Cross SUMAR at or above 9000FT, cross ITE R260/43.1DME at or above FL180.

STANDARD DEPARTURE CHART -INSTRUMENT

RJOO / OSAKA INTL

TRANSITION

ASAGI TRANSITION

From over TIGER, via KCE R324 to ASAGI.
Cross KCE R324/22.4DME at or above 7000FT.

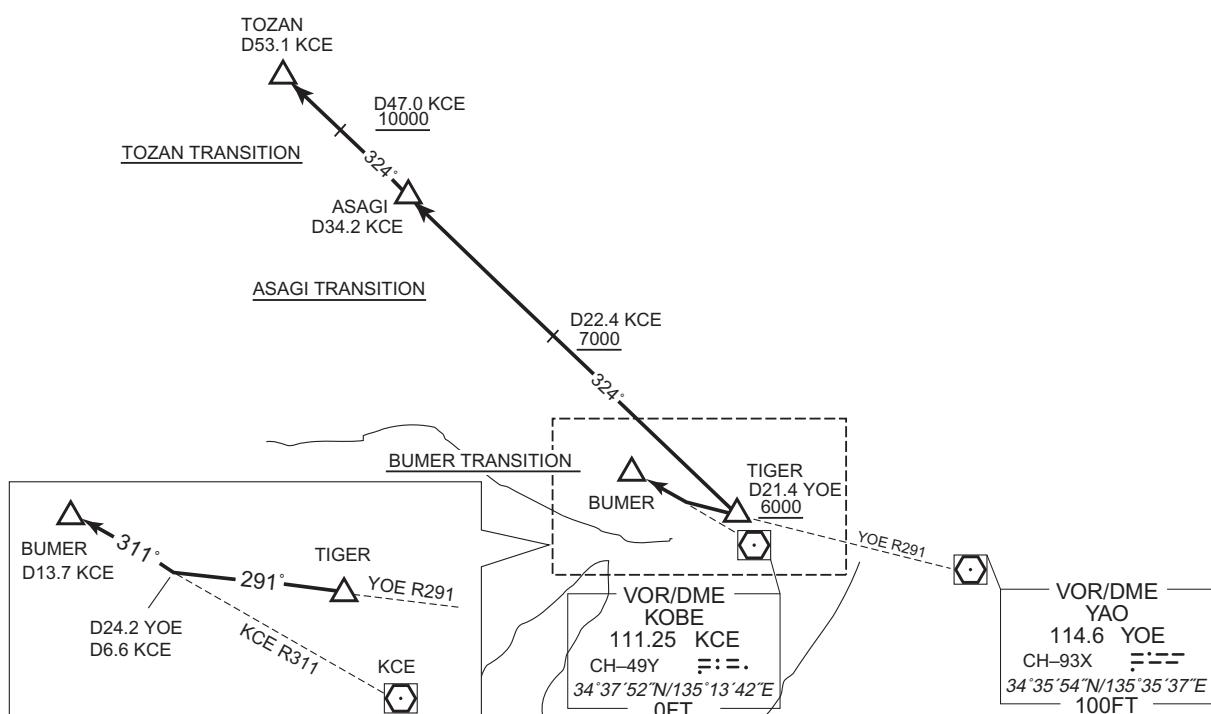

TOZAN TRANSITION

From over TIGER, via KCE R324 to TOZAN, via ASAGI.
Cross KCE R324/22.4DME at or above 7000FT, cross KCE R324/47.0DME at or above 10000FT.

BUMER TRANSITION

From over TIGER, via YOE R291 to intercept and proceed via KCE R311 to BUMER.

CHANGE : TOZAN TRANSITION. Radial FM KCE.

STANDARD DEPARTURE CHART-INSTRUMENT

RJOO / OSAKA INTL

SID and TRANSITION

MINAC FOUR DEPARTURE

RWY 32R/32L : Climb RWY HDG to 500FT or above, turn left within 4NM from RWY end/ITE 2.1DME,...

RWY 14R/14L : Climb RWY HDG to 500FT or above, turn left,...
...via ITE R101 to intercept and proceed via KCE R077 to MINAC.

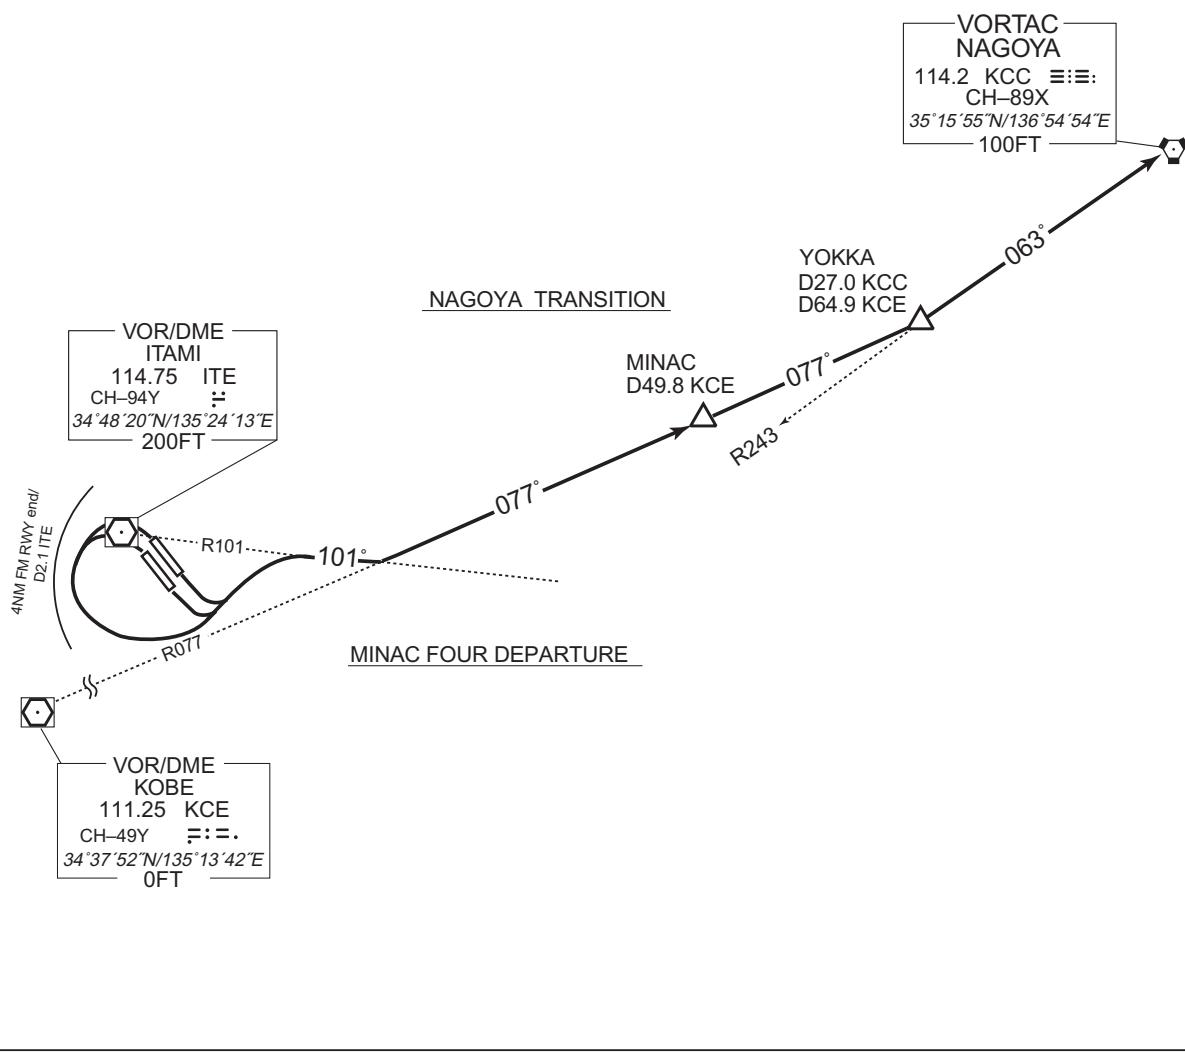

Note: When take off RWY14R/14L, following climb gradient should be maintained until 500FT.

Speed (Knots)	60	90	120	150	180	210
Rate (Feet/Min)	300	450	600	750	900	1050

NAGOYA TRANSITION

From over MINAC, via KCE R077 to YOKKA, via KCC R243 to KCC VORTAC.

CHANGE : PROC renamed. Radial FM KCE.
