Intermediate Holding Position Marking and Intermediate Holding Position Lights

The Intermediate Holding Position Marking indicates the position where aircraft is to hold to prevent collision with other aircraft on the taxiway. The Intermediate Holding Position Lights are collocated with the Intermediate Holding Position Marking and synchronized with the taxiway center line lights. The Intermediate Holding Position Lights consist of 5 yellow lights and the Intermediate Holding Position Marking is a single broken line as illustrated in the figure below;

GP HOLD LINE

The "GP HOLD LINE" is installed on TWY T1 AND T2 , consists of Intermediate holding position lights and marking. (see below figure, and AD2.24-ADC-1 AD CHART) REF AD2.20.2.2.1 for taxiing procedure on the "GP HOLD LINE".

The diagram illustrates a runway layout with various lighting and marking systems. The main layout shows a central runway with multiple segments, each labeled with a specific light or marking type and a number. The legend defines the symbols used:

- Runway Entrance Lights (REL): Represented by a semi-circle.
- Takeoff Hold Lights (THL): Represented by a triangle.
- RWY HLDG PSN marking: Represented by a line.

The main layout includes the following segments and markings:
